

Wind Energy Brakes

Stromag CB 90 RS

Wind Energy Brakes (Rotorbrake / Parking Brake)

The solution for a fast maintenance of a brake system

Maintaining a brake system can take a long time. The NEW CB 90 RS reduces the time which is required for the maintenance intervals. The screwed end stop allows changing the lining pads quickly and without dismantling the complete brake system.

Due to its modular design, the CB 90 RS can be tailored specifically to the needs of the customer. In addition, the CB 90 RS offers a weight-optimized design and a clamping force up to 222 kN per brake caliper half.

With the CB 90 RS you are ideally equipped for every wind energy installation.

Application

- Wind turbines

Benefits include

- Clamping forces up to 444 kN
- Leveled response time due to a constant air gap to the brake disc
- Fast and easy change of lining pads without dismantling the caliper
- Brake discs cannot be installed incorrectly (Poka Yoke)
- Flexibility through modular design
